

## Sole-Mate™

### Static Dissipative Footwear Test Station

The **Sole-Mate™** is a user friendly device that is designed to test the condition of static dissipative footwear prior to entering safety critical hazardous areas exposed to potentially ignitable atmospheres.

**Enquiry** > Click here to submit a product related query or a request for quotation.

International Standards (detailed on the next page) recommend regular testing of static dissipative footwear. The **Sole-Mate** provides a time efficient and cost effective method of ensuring personnel operating in hazardous areas are wearing static dissipative shoes that are capable of preventing electrostatic charge accumulation on their bodies.

The **Sole-Mate** tests the condition of the shoes by measuring the resistance of the electrical loop through the operator and their footwear. If the resistance of the shoes is too high, the **Sole-Mate** will indicate that the shoes have failed the test via a red lamp and buzzer alarm. If the shoes pass the test a green lamp will indicate to the operator that the shoes are fit for purpose.

Additionally, users can interlock the tester with audible alarms or entry doors into hazardous areas so that personnel not wearing suitable footwear cannot enter the hazardous area.

All **Sole-Mate** units are supplied with 3 m cable to wire into a mains supply. The U.S. unit is supplied with 6 ft. cord and U.S. 3 prong plug.

- > Upper level resistance options available
- > Sole Mate resistance level tester
- > IP65 industrial standard enclosure

**Sole-Mate Static Dissipative Footwear Test Station**

**Newson Gale** | For over 30 years Newson Gale has been supplying the chemical and processing industry worldwide with its market leading range of static control products ensuring people and plant are protected from static related fires and explosions.

## Sole-Mate™ Static Dissipative Footwear Test Station

### Relevant International Standards

Based on user preference, the **Sole-Mate** can be ordered to measure upper level resistance as defined by the following standards:

- > EN ISO 20345 1x10<sup>9</sup> ohm
- > IEC 60079-32 1x10<sup>8</sup> ohm
- > ASTM F2413-05 1x10<sup>8</sup> ohm

PLEASE NOTE: Equipment specifiers must ensure that the **Sole-Mate** Tester resistance level selected is compatible with the static dissipative shoes in use within the hazardous area. E.g.: a 1x10<sup>8</sup> resistance level should not be selected for EN ISO 20345 compatible shoes.

### Sole-Mate Resistance Tester VESF59 & VESF59/A

The resistance test unit can be used at regular intervals (every 6 or 12 months) to ensure the upper resistance threshold of the footwear tester is operating at the correct level.

## Product Ordering Codes

Ordering Code	Product Description
SM2/108E	1 X 10 <sup>8</sup> 115 230 Vac (Euro cable)
SM2/108U	1 x 10 <sup>8</sup> 115 230 Vac (US cable and plug)
SM2/109E	1 x 10 <sup>9</sup> 155 230 Vac (Euro cable)
SM2/109U	1 x 10 <sup>9</sup> 115 230 Vac (US cable and plug)
VESF59	1 x 10 <sup>9</sup> Sole Mate Resistance Level Tester
VESF59/A	1 x 10 <sup>8</sup> Sole Mate Resistance Level Tester

The Sole Mate™ forms part of the Static Grounding and Bonding Equipment available from Newson Gale.
