

Grounding Station

For Static Grounding Clamps

Grounding Station

Up to two Newson Gale static grounding clamp and cable assemblies can be connected to the Grounding Station which is then connected to the verified site earth.

If more than two items of plant equipment need static grounding protection, then multiple Grounding Stations can be interconnected to provide a secure and reliable path to the verified site earth.

Made from stainless steel the Grounding Stations can be mounted in all industrial and hazardous areas ranging from clean rooms to corrosive atmospheres.

The Grounding Station and wall mounted static hazard sign provide the operators with a clearly identifiable location to stow the grounding clamp and cable assembly when not in use.

Features:

- > Grounding station can be connected to a locally verified site earth
- > Enables 2 earthing clamp and cable assemblies to be mounted in a convenient manner
- > Multiple grounding stations can be linked together if more items of plant require static grounding protection
- > Provides convenient stowage point for large and medium sized clamps when not in use
- > All stainless steel construction permits installation in corrosive or clean room atmospheres
- > "Danger Static Hazard / Attach Earthing Clamp" warning sign included
